

Description

HTV (Heat Transfer Vinyl) is a type of vinyl that can be applied to fabric and other materials using heat and pressure. It is commonly used for creating custom designs, logos, and text on t-shirts, hats, and bags. The vinyl is available in various colors and finishes, including matte, glossy, and metallic. It is also available in different thicknesses and can be cut into various shapes and sizes. The application process typically involves using a heat press or a similar device to apply the vinyl to the material. The temperature and time required for application can vary depending on the material and the specific HTV product. Once applied, the vinyl is durable and can withstand washing and wear.
