

Description

FRP (Carbon Fiber) is a composite material made of carbon fibers and resin, known for its high strength and low weight.

FRP is used in various applications such as automotive parts, aerospace components, and sports equipment. FRP is also used in construction for reinforcement and repair.

Specification

Material	FRP (Carbon Fiber)
Color	Black
Texture	Carbon Fiber
Weight	Light
Temperature Resistance	195°C / 65°F
Strength	High
Durability	Excellent
Flexibility	Low
