

Description

MT-41M is a high-precision dental X-ray film holder. It is designed for accurate and stable exposure of dental radiographs. The device features a robust aluminum frame and a yellow plastic base. It includes four micro registration screws for precise alignment and two frame clamp screws for secure clamping. The front and back micro registration screws allow for fine-tuning of the film's position, while the left and right micro registration screws provide lateral adjustment. The device is compatible with standard dental X-ray film and is easy to use and maintain.

Feature

1. High precision and accuracy
2. Stable and reliable performance
3. Easy to use and maintain
4. Compact and portable design
5. Suitable for 3cm dental X-ray film
6. Durable and long-lasting
7. Simple and intuitive operation
8. Wide range of applications
9. High quality and reliability
10. Excellent customer service
