

The [polypropylene](#) [polymer](#) is a thermoplastic polymer consisting of repeating units of propylene monomers. It is the second most common plastic in the world, with over 100 billion pounds of polypropylene being produced annually. Polypropylene is known for its high strength, stiffness, and resistance to chemicals and environmental degradation. It is used in a wide range of applications, including automotive parts, packaging, and consumer goods. The [polypropylene](#) [polymer](#) is a thermoplastic polymer consisting of repeating units of propylene monomers.
