

Description

This [4-Station Automatic Pneumatic Heat Press Machine](#) is high-quality heat transfer machine designed for efficient and automated production. With four workstations, this auto heat press machine allows simultaneous printing on multiple items, making it ideal for high-volume production. It is suitable for a wide range of heat transfer applications, including garments, bags, and promotional items. With fully automatic operation system, pneumatic drive technology, and multiple interchangeable working stations, this heat press machine makes it easy to take on any heat transfer project.

S4-20 fully automatic

heat press machine is equipped with 4 heat platens and 4 exchangeable under platens. It makes the work labor saving and high efficient – one person can operate two or more of this machine at the same time. With the pneumatic drive technology adopted, the machine can produce larger and even pressure on the substrate.

Microtec S4-20 auto heat press also features 4 rotary working stations that make your work flow smoothly. They're interchangeable and very easy for assembly and disassembly. Besides, all the under platens are threadable platens that are perfect for clothes printing, and the non-stick Teflon-coated heat platen avoids transfers sticking on the heat platen.

With the GY-06 digital controller and fully digital temperature & time control, you can easily operate this machine with no effort. The accurate controls ensure perfect printing results. This advanced machine is perfect for printing garments like T-shirts, sweaters, as well as thin flat substrates like flat boards and photo panels. It is really a convenient and efficient equipment for your heat press work.

S4-20 is ideal for use on apparel, paper, hard and soft goods, packaging, signs, koozies, sublimation and more. Great for DTG, vinyl, printed transfers, leather, heat seal patches, foil and other special effects.
