

The [High Temperature Resistance Glove](#) is an essential safety accessory designed for individuals working in high-heat environments. These [gloves](#) are crafted from advanced heat-resistant materials, providing reliable protection against temperatures up to 932°F (500°C). Ideal for various applications such as welding, metalworking, glass blowing, and kitchen use, these gloves offer exceptional durability and flexibility. The interior is lined with soft, moisture-wicking fabric to ensure comfort during extended wear, while the outer layer provides a non-slip grip for safe handling of hot objects. Whether you're a professional or a home enthusiast, the [High Temperature Resistance Glove](#) is a must-have for ensuring safety and efficiency in any heat-intensive task.

Feature

High Heat Protection: Withstands temperatures up to 932°F (500°C), ensuring maximum safety.

Durable Materials: Made from advanced heat-resistant fabrics for long-lasting use.

Comfortable Lining: Features a soft, moisture-wicking inner lining for extended wear.

Flexible and Non-Slip: Provides a secure grip and excellent dexterity for handling hot objects.

Versatile Use: Ideal for welding, metalworking, glass blowing, cooking, and other high-heat applications.

Safety and Efficiency: Essential for protecting hands and ensuring safe and efficient performance in heat-intensive environments.

Specification

Modle No.	HTG-1425
Size	L25xW14cm
Packing Size	55x45x37cm
Net Weight	20kg
