

Description

The [heat press platen](#) wrap cover can help you keep the heat press upper platen clean and free of inks, adhesives, and excess residue. Protect heat press and garment. The front side of this heat press plate cover is made of glass fibre fabric for heat resistance. The back side is made of a stretchy polyester fabric for easier handling and use.

Feature

Easy to Use: It is quality coated on the front and stretchy polyester fabric on the back, making it easy to put on and take off.

High Temperature Resistance: Quality coating is resistant to high temperatures and can be heat resistant to 500 °F (260 °C), which can help you to complete thermal transfer work.

Easy to Clean: Heat press plate wrap covers are not sticky and can be cleaned of residue, ink and adhesives with a damp cloth.

Effective Protection: Wrap cover of heat platen protects the upper platen from scratches, protects the silicone pad on the lower platen from scratches, abrasions and tears.

Questions

Q: Will using an upper platen cover mean that I'll have to adjust the temperature settings on my heat press?

A: We suggest that when using an upper platen cover, you increase your temperature setting by 5 degrees or add 5 seconds to application time.

Q: How do I clean my Heat Press Upper Platen Cover?

A: You can wipe your Heat Press Upper Platen Cover with a damp cloth. For best results, wipe down daily or between applications to keep excess residue from transferring to garments.

Application

Use with your 15"x15" or 16"x20", 16"x24" heat press machines. This heat press plate wrap covers protects the upper platen from scratches and adhering residues and protects the silicone pad of the lower platen from scratches, scrapes and tears. It greatly increases the service life of the hot press plate.
