Description

Direct to film (DTF) printing is a relatively new printing technology that allows for high-quality printing onto a variety of materials. Additionally, DTF printing is a relatively fast and cost-effective printing method, making it suitable for small- to medium-sized businesses or print-on-demand services.

Microtec DTF printer can produce high-quality prints with a range of colors, gradients, and photographic images. It can be used to print designs on a wide range of materials, including textiles such as t-shirts, hoodies, and bags, jeans, hat etc.

Feature

Simple: DTF Printers are easy to learn and apply, no need to make a large initial investment.

Versatile: DTF Printer allows to customize textiles of almost any type regardless of color. It can be applied on cotton, polyester and their blends, both light and dark.

Efficient: In small levels as well as in large production volumes. It is possible to print the design on the film and store it as a silkscreen transfer until it is ready to be applied to the textile.

High quality results: Colorful prints with excellent elasticity, fully integrated into the fabric. Very soft and pleasant to the touch.

Cost-effective: Compared to other printing methods, DTF printing is more cost-effective as it does not require pretreatment, screens, or transfer papers.

Specification

Model No. DTF A3 Printer Head 2PCS Epson XP600 Print Width ≤300mm Applicable Media PET film Printing Speed 6pass 5[//h, 8pass 3[//h Printing Resolution 720dpi/1080dpi/1440dpi Print Color KCCMMY+WWWWWW Ink Type DTF Ink Ink Consumption Color ink 4 liter + White ink 3 liters for 35-60 sq.m.
