

Description

This splitter stand is designed for Microtec [SHP series heat press machines](#). It allows operators to easily hold the shirt over the lower platen and achieve quick and easy T-shirts or hoddies installation, removal, and manipulation.

With this splitter stand, it is handy when trying to avoid double-compression and heating of a previously applied transfer on the same T-shirt.

It also prevents all sublimation ink migration into the inside and backside of the shirt. By securely holding the back of the shirt away from the heat zone, it creates a barrier that prevents any ink migration to the inside or backside of the garment.

Specification

Model No.	HPS-07
Stand Size	56.5*28.6*16.6cm
Packing Size	64.5*36.5*26cm
Net Weight	7.4kg
Gross Weight	8.9kg
Application	Suitable for SHP series heat press machines
