

Description

This [Teflon sheet](#) is used to keep the heat platen away from dirt. Heat Resistant characteristic makes this sheet popular in heat press field.

Except the normal sizes, custom sizes also available. The size in roll is with the width of 1 meter, the length of 100 meters.

Prevents inks from staining the heat platen
Eliminates scorching on products

Keeps transfers from sticking to platen Size:

40x53cm for 38x38cm Platen

42x63cm for 40x50cm Platen

42x73cm for 40x60cm Platen

77x110cm for 75x105cm Platen

82x105cm for 80x100cm Platen

102x125cm for 100x120cm Platen

102x166cm for 100x160cm Platen

Different size available

Feature

Non-Stick Surface: Teflon sheets prevent materials, such as vinyl, fabric, or transfer paper, from sticking to the heat press platen. This ensures clean and precise transfers without any residue.

Heat Resistance: With the ability to withstand high temperatures up to 260°C (500°F), Teflon sheets provide consistent heat distribution, ensuring optimal transfer results without damaging the materials.

Durability: Teflon sheets are highly durable and resistant to wear and tear, making them a cost-effective choice for frequent use in heat press operations.

Ease of Cleaning: The smooth, non-stick surface of Teflon sheets makes them easy to clean. Any adhesive residue or ink can be easily wiped off, maintaining a pristine working surface.

Protection: Teflon sheets protect the heat press machine's platen from scratches, inks, and other contaminants, extending the machine's lifespan and ensuring consistently high-quality results.

Smooth Transfers: The low friction of Teflon sheets ensures smooth movement of materials during the pressing process, preventing any dragging or shifting that could affect the transfer quality.
