

Description

Made of Premium Grade Teflon/Glass material ,this [pad protector](#) is used for protect the sillion pad from scratch and stains.Non-sticking characteristic make sure it easy to cleaning.Different sizes available.

Feature

Superior Protection: Made from high-quality Teflon/Glass material, this pad protector effectively shields your silicone pad from scratches, stains, and other damages, extending its lifespan and maintaining its pristine condition.

Non-Stick Surface: The non-stick characteristic of the Teflon/Glass material ensures that any adhesive, ink, or residue does not stick to the surface. This feature makes it incredibly easy to clean, saving you time and effort.

Durability: Constructed from premium-grade materials, the pad protector is highly durable and resistant to wear and tear, making it a long-lasting addition to your heat press equipment.

Heat Resistance: The Teflon/Glass composition provides excellent heat resistance, ensuring consistent performance even under high-temperature conditions. This makes it ideal for use in demanding heat press applications.

Versatility: Available in different sizes, our pad protector can accommodate various heat press machines and applications, providing flexibility and convenience for different operational needs.

Easy Maintenance: Thanks to its non-stick surface, cleaning the pad protector is a breeze. Simply wipe off any residue, and it's ready for the next use, ensuring a clean and efficient working environment.
